

PROJECT TITLE: MovieMatch – Movie Recommendation & Review System

Project Overview:

MovieMatch is a web-based movie recommendation and review system where users can browse movies, search movies, filter by genres, view ratings/reviews, and get recommendations for similar movies. The project focuses on database relationships, movie analytics, and user interaction.

Tech Stack:

- Frontend: HTML, CSS, JavaScript
- Backend: Node.js + Express.js
- Database: MySQL

Main Goal:

To create an interactive and visually attractive movie platform that demonstrates strong database concepts such as relationships, joins, filtering, searching, and analytics.

MAIN FEATURES

Home Page

- Trending movies section
- Top rated movies
- Recently added movies
- Movie categories/genres

Movie Search System

- Search movies by:
 - movie name
 - actor
 - director
 - genre

Movie Details Page

Each movie page will contain:

- Movie poster
- Release year
- Genre
- Cast
- Director
- Rating
- Description/storyline
- User reviews

4 Genre Filtering

Users can filter movies by:

- Action
 - Horror
 - Comedy
 - Sci-Fi
 - Drama
 - Thriller
- etc.

5 Movie Rating System

- Users can rate movies from 1–5 stars
- Average rating calculated automatically

6 Review System

- Users can add reviews/comments
- No login system required
- User only enters name before posting review

7 Similar Movie Recommendation

Example:

“If you liked Interstellar, you may also like Inception.”

Recommendations based on:

- genre
- rating
- director
- actors

8 Trending Section

Movies become trending based on:

- highest ratings
- most reviews
- most views

9 Movie Battle Feature (WOW Feature)

Two random movies appear on screen:

“Which movie is better?”

User selects one movie.

The system stores votes and shows:

- most loved movies
- ranking leaderboard

10 Analytics Dashboard

Admin/analytics section showing:

- Most popular genre
- Highest rated movie
- Most reviewed movie

- Top actors
- Average ratings by genre

DATABASE TABLES

Main Tables:

- Movies
- Actors
- Directors
- Genres
- Reviews
- Ratings

Relationship Tables:

- Movie_Actors
- Movie_Genres

Optional Tables:

- Movie_Views
- Movie_Battle_Votes

UI/Design IDEA

- Dark Netflix-style theme
- Movie posters/cards
- Hover animations
- Responsive design
- Modern search/filter UI

DATABASE CONCEPTS USED

- One-to-Many Relationships
- Many-to-Many Relationships
- Joins
- Aggregate Functions
- Search Queries
- Filtering
- Sorting
- Normalization
- Primary & Foreign Keys

TEAM DIVISION

Member 1:

- Database design
- SQL queries

Member 2:

- Frontend UI pages

Member 3:

- Backend APIs (Node.js)

WHY THIS PROJECT IS GOOD

- Looks modern and professional
- Fun and interactive
- Strong database concepts
- Easy to demonstrate in presentation
- No complex login/authentication needed
- Attractive UI potential
- Unique compared to basic management systems
